

Korkfix

Product description:

With our corker beer and other beverages in 0,33l and 0,5l glass bottles with crown caps of 26mm or 29mm diameter can be closed.

The crown cap is inserted by hand and held in place by a magnet on the corking head. The corking is done by the head pressing the crown cap onto the bottle mouth by means of a cylinder and thus sealing it. For safety reasons, the corker has a two-hand operation by means of two push buttons, one on the right and one on the left of the housing.

Product data:

Dimensions h/w/d: 780/260/290mm

Weight: 18kg
