

CAN SEALER

PRODUCT DESCRIPTION

With our can sealer cans can be sealed. After filling the can, it is placed in the machine and the lid is put on. The can is closed by two flanging rollers. For safety reasons, the can seamer is operated as a two-hand operation by means of two buttons on the right and left side of the housing.

In order to adapt the can seamer to the cans you use, we only need a few cans as samples.
